Cyclistic Data Cleaning Changelog

- 07-04-26: I cleaned the 2025 Divvy trip data in BigQuery SQL. I preserved the raw imported table, created a cleaned analysis table, removed duplicate ride IDs, removed rows with missing critical fields, filtered out rides shorter than 1 minute and longer than 24 hours, and created new fields for ride length, month, day of week, hour, weekday/weekend, and season. Station name nulls were retained because some valid rides may not include station information.
